Chapter 5 Error Log

Evens
The program compiled and the test passed. No error needed a code change.

NumbersSum
The program compiled and both sum tests passed. I also checked the input loop so numbers below 1 are rejected.

OddSum
The program compiled and both tests passed. Testing an even ending number confirmed that the loop stops at the previous odd number.

DigitsSum
The program compiled and all three tests passed. Testing zero confirmed that the starting sum of 0 is returned when the loop does not run.

CountVowels
What happened: The first no-vowels test failed because I used the phrase "rhythm class" and expected 0.
Cause: The word "class" contains the vowel a, so the correct count for that phrase was 1.
Fix: I changed the no-vowels test phrase to "rhythm myths" and ran the full test set again. All 11 tests passed.
